

Dear customer,

The FAMHP uses the Peppol network (European standard) for electronic invoicing and the exchange of business documents. Peppol offers a standardised and reliable way to send and receive e-invoices and other documents quickly and efficiently.

For customers using an e-invoice system (such as Ariba, Eisai, Coupa Supplier Portal, Taulia, Tradeshift or Graphite Connect), it is possible to link an the system to the Peppol network. This can be done via specific connectors or middleware solutions that ensure seamless document exchange between your e-invoice system and our Peppol access point.

By integrating, you can benefit from the standardised, secure, and efficient communication that Peppol provides, while continuing to work with your trusted e-invoice system. Please contact your IT service or your provider to take the necessary steps for this linkage.
