

# Integrating patient preferences in the drug life cycle

The basic concepts and why it is important

Presenter: Professor Isabelle Huys (KU Leuven)

**Disclaimer:** This presentation and its contents reflects the view of the presenter and not the view of PREFER, IMI, the European Union or EFPIA.

prefer.

# About the PREFER project

The Patient Preferences in Benefit-Risk Assessments during the Drug Life Cycle (PREFER) is a five year project that has received funding from the **Innovative Medicines Initiative 2** Joint Undertaking under grant agreement No 115966. This Joint Undertaking receives support from the European Union's **Horizon 2020** research and innovation programme and **EFPIA**.

# The objective of PREFER

To develop recommendations for measuring and using **patient preferences** in industry, regulatory, and health technology assessment body/reimbursement agency **decision-making across the drug life cycle**

- Patient preferences?
- The drug life cycle?
- Decision-making?

# Overview of today's presentation

1. What are "**patient preferences**"?
2. The **drug life cycle**
3. The main **decisions** of the drug life cycle
4. How can **patient preferences** contribute in these decisions
5. PREFER's **approach**

# What are “patient preferences”?

- Difficult question...
- Defined by the Food and Drug Administration (US):

*“the relative desirability or acceptability to patients of specified alternatives or choices among outcomes or other attributes that differ among alternative health interventions” (1)*

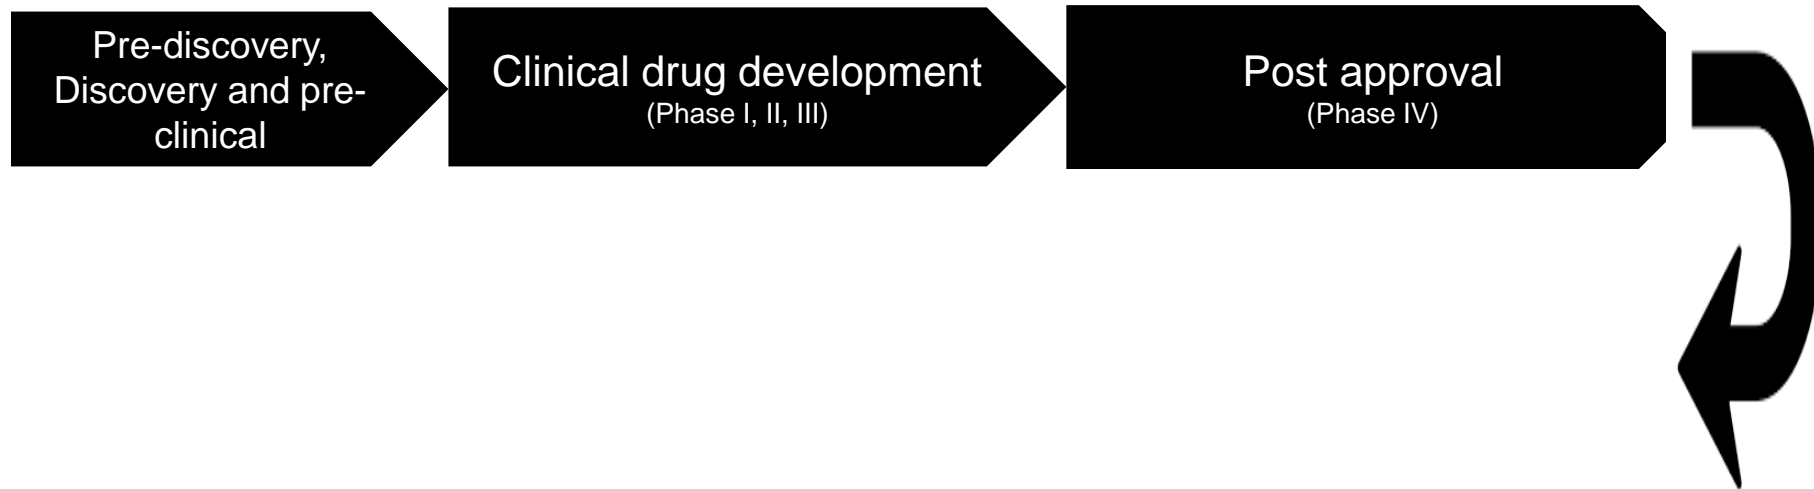

(1) Patient Preference Information - U.S. Department of Health and Human Services, Food and Drug Administration, Center for Devices and Radiological Health and Center for Biologics Evaluation and Research; 2016.

# What are patient preferences?

- Or in plain language:

*“Patient preferences reflect why patients **choose** a particular health intervention over other available options. This health treatment can be a drug or a medical device. A preference can be stated **for a health intervention as a whole or for the advantages and disadvantages of one intervention**. In order to make a choice or state a preference, patients need to **weigh up the advantages and disadvantages and compare them** to those of other health intervention.”*

# The main **decisions** in the drug life cycle

# The main **decisions** in the drug life cycle

## 2. Regulatory decision: *“Do we allow the drug to come on the market?”*

Decision mainly based on **benefits** (=does the drug work) relative to **risks** (=side effects)

## 1. Industry decisions: e.g. *“Which product will we develop?”*

## 3. Reimbursement decision: *“What will the healthcare payer and patient have to pay for this drug?”*

Decision based on **more** than benefits and risks: e.g. cost of the treatment, impact on national health budget, improvement in outcomes compared to existing treatments

# Patient preferences in these decisions

e.g. Patient preference studies to provide regulators better understanding of how patients value benefits and risks

**2. Regulatory decision: “Do we allow the drug to come on the market?”**

**1. Industry decisions: e.g. “Which product will we develop?”**

e.g. Patient preference studies to help industry define areas of unmet medical needs

**3. Reimbursement decision: “What will the healthcare payer and patient have to pay for this drug?”**

e.g. Patient preference studies are performed to provide payers with a better understanding of how valuable and important the better outcomes of the drug are to patients

prefer.

# Many questions still remain

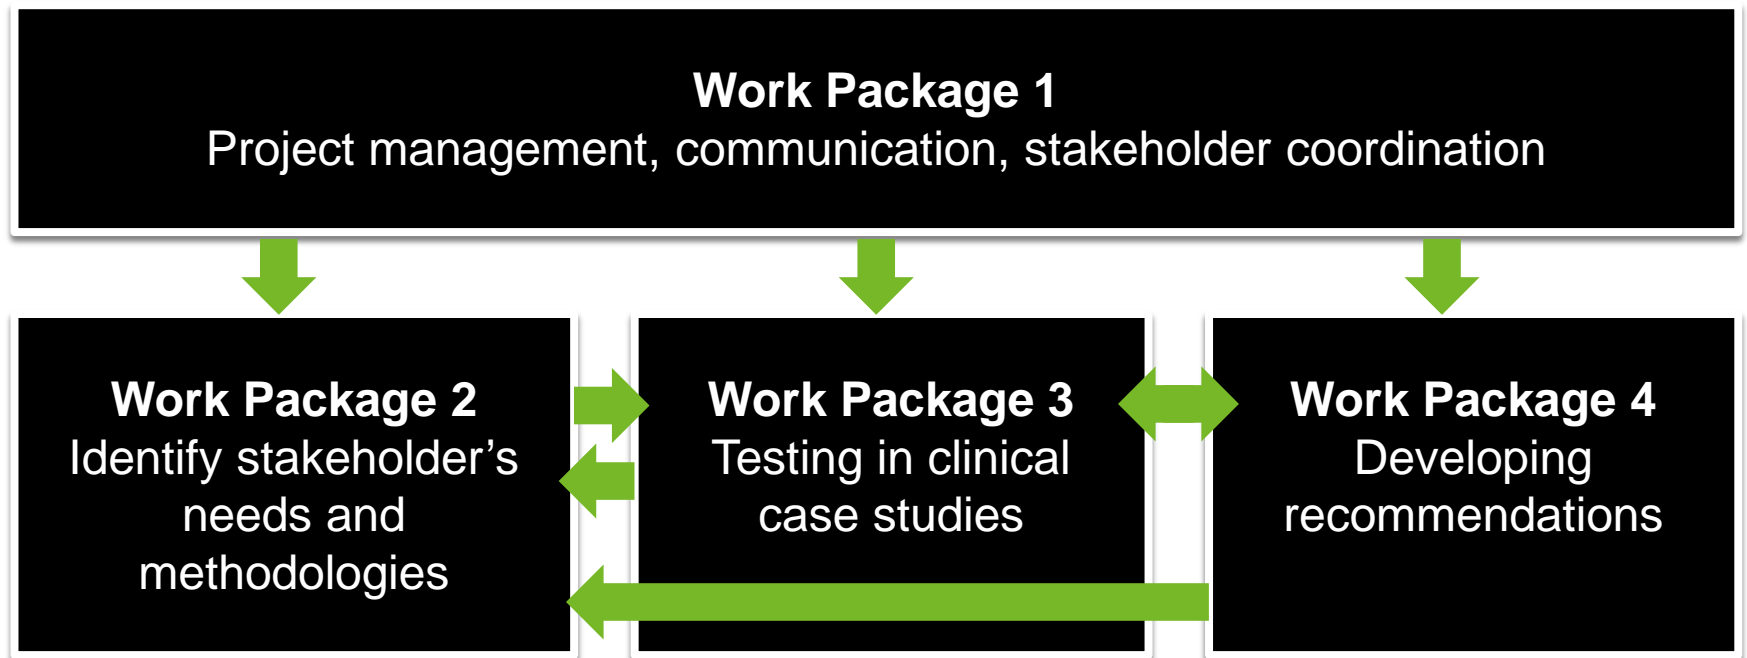

- What are the decisions where patient preferences can be used?
- What do stakeholders need in order to integrate patient preferences in their decisions?
- What methods are best suited to inform their decisions?
- ...

# How does PREFER addresses these questions?

1. By identifying **decision-making processes** where patient preferences could be used and identifying **stakeholders'** desires, expectations, requirements and concerns (WP2)
2. By identifying available **methods** for measuring patient preferences and quality criteria for these methods (WP2)
3. By conducting **patient preference studies** (WP3)
4. By developing **recommendations** to guide industry, regulatory authorities and HTA/reimbursement bodies (WP4)

All of the above will be done with **intensive communication with all stakeholders and in particular with patient representatives**

# PREFER work packages

# Public-private partnership

- **Coordinator:** Uppsala University
- **Project leader:** Novartis Pharma
  - 10 Academic research institutions
  - 4 Patient organisations
  - 1 Health Technology Assessment body
  - 2 SMEs (small and medium sized enterprises)
  - 16 Pharmaceutical companies

# PREFER partners

Erasmus University Rotterdam

UNIVERSITY OF BIRMINGHAM

Universitätsklinikum Erlangen

KU LEUVEN

# Organisation of PREFER

- Shared leadership at all levels
  - From leadership, to work packages to tasks
- Stakeholder partners & advisory groups
  - Patient Advisory Group
  - HTA and Payers Advisory Group
  - Regulatory Advisory Group
- Scientific & Ethics advisory boards

# Stakeholder advisory groups

## PATIENTS

4 partners

## HTA AND PAYERS

1 partner, 6 external advisors

## REGULATORS

External advisors

# 1: Assessing methods

- Literature review
- Interviews and focus group meetings with
  - patient organisations
  - physicians
  - regulatory authorities
  - health technology assessment bodies
  - industry experts
  - & academics

on their key concerns, needs, expectations and desires on the assessment and use of patient preferences.

## 2: Clinical case studies

Patient preference studies to be conducted in three disease areas where **patients** and **clinical research partners** already provide expertise:

- Cancer
- Rheumatoid arthritis
- Neuromuscular disorders

Partners from the **pharmaceutical industry** will provide additional patient preference studies to cover disease areas from the companies' portfolio.

# 3: Recommendations

- **Mid-2019:** draft recommendations to be available, testing in other disease areas and decision points by stakeholder advisory groups.
- **Mid-2021:** refined draft recommendations to be available
- **Autumn 2021:** Final recommendations to be presented.

# In summary, PREFER

- Will **develop evidence-based recommendations** to guide industry, Regulatory Authorities, HTA bodies, reimbursement agencies
- Carried out by a **diverse consortium** that involves stakeholders: both as partners and advisors
